

WORM OBSERVATIONS

Go and dig up some worms from your backyard (or you can go to fishing tackle shop and pick up some large worms of your own.)

Have fun watching your worms. Try to complete this checklist.

- Feel the bristles on the bottom of a worm.
- Figure out which end is the head.
- Find its heart (you may need a magnifying lens)
- Does it have rings?
- What does it feel like?
- Watch it burrow into some dirt.
- Spray it with some water to watch it wriggle (don't drown it though)
- Dig up a shovel full of dirt from your garden. How many worms did you find?
